Create and run backups for your Android apps and data. Backup to Cloud so you can restore from any device. Clean out the cache to free up space. Secure data with a password so it can be restored later. Capture apps and data to a list of apps so you can export them. Enable or disable app permissions. Support for recent Android devices, including phones and tablets. Titanium Backup is a Windows application developed to help you create backups for important files and folders by running scripts and packing items in ZIP archives. It may seem complicated to work with at first, but the tool is quite user-friendly. Hassle-free installation and outdated

interface The setup procedure does not take a long time to finish. As for the interface, Titanium Backup is outdated, yet simple to navigate. The first step is creating scripts to be able to run backups. Create new scripts by setting folders and settings Folders can be added to the script using the tree view only, since the drag-and-drop method is not supported. It is possible to include subfolders and timestamps in the archive name, specify a script name and storage path, pick the compression level and minimum date and time to include, as well as password-protect the archive and split it into multiple parts. What's more, the list with folders can be printed. Multiple scripts can be created and you can select the preferred one from a drop-down menu in order to immediately run it. In addition, their properties can be edited. Any warnings can be examined in a separate area. Evaluation and conclusion We have not experienced any unpleasant surprises in our tests, since Titanium Backup did not freeze, crash or pop up error messages. It executes commands and carries out backup jobs rapidly while remaining light on the system resources using low CPU and RAM. On the other hand, the app has not been updated for a long time and this can be clearly seen from its interface. Handy Backup is a tool designed to be able to create backups for Windows system files. Titanium Backup helps you create and schedule backups of important files and folders, in a way that's fast, hassle-free, and unobtrusive. You'll just need to specify the folders you want to backup, and your backups will be done automatically. The program has a powerful scheduler that lets you decide which folders to backup when and whether to run automatically at a certain time. To make backups even faster, the app features multiple ways to back up, including a few different backup options and a time-based scheduler that will ensure your important data is protected. Your backup will be packed in a ZIP archive for convenience, and if you ever need to restore your data, it will be easy to remove it. If you need to go ahead and schedule the backup, you'll have the option of including your calendar to ensure that the backup is run at an optimal time. So if you're having a busy day, this is your chance to relax knowing that your personal data is protected. The program is optimized to save your time, making it fast to start backups, and to make them automatically and safely, without annoying you with messages or popping up error messages. There are many configuration options, so you can specify when you want the backups to be done, and you can also remove individual files from the backup. Titanium Backup is easy to use, and the interface is minimalistic, so you can use it right away. If you need to check the status of your backups, a detailed log of the job will tell you exactly what's happening in the background. All in all, this app is the perfect solution for those who are looking for an easy-to-use backup application. Titanium Backup Pricing and features: Titanium Backup is completely free and you can backup both internal and external storage. A paid version is available, with

additional features. The free version allows backup up to 10 folders, and there's a premium version with a 10-folder limit. This is priced at \$2.99, so you can see why it's not completely free. Synology DiskStation Manager (DSM) 8.0 is a management solution for DiskStation and DiskStation Plus models. The product combines a simplified, user-friendly graphical interface with advanced functionalities, such as synchronous and asynchronous copy. Review version history and perform manual updates Now you can review the updates made since the last backup in order to perform further actions. You can view information about the backup run, such as date, time, the size of the file, path and name of the backup folder, and the number of files it contains. The changes can be made manually and the data can be managed with regard to the total number of backups created. Easy to use If you are a beginner, the tools can be easily used. The interface displays a main screen and allows you to enter information. It is a simple product that is optimized for beginners, as it is suitable for new users. However, it is also available for the advanced user who is willing to do more complex tasks. You can copy and move the backup data to other computers or servers, compress it or extract it to your SD card. It is possible to specify the name of the archive, password and the transfer time. Bottom Line: For users who want to take a quick snapshot of their data, the utility can be found in the Synology DiskStation Manager (DSM) 8.0 package. It can be used for safe file backups to the SD card. Ease of use: Intuitive interface; only suitable for beginners; Read and write files to SD card; Write data to the SD card; Keep the backup on SD card; Back up a folder to an archive; Extract backup archive; Extract the backup archive We don't

know if this is still true but it is what i have done for months now. Everytime i update android to a new version, it's backup time. If i have an SD card, it's quite easy to add that. If i don't, then i have to look for my backups and sort them out. Once i have located all the folders that are of interest, i then drag and drop them to my SD card. It's quite easy if you know where to look. I use the application Titanium Backup to enable multiple backups, among others. When my SD card has reached its full capacity, I remove the old backup folders to free up space. Titanium Backup offers to select a set of backup files to preserve the oldest ones for further use.
