Photography has come a long way in just a couple of decades. Pictures can now be created on a computer, even to simulate 3D, with different such mechanics. One of them refers to spotting hidden objects in plain sight, and with the help of Stereogram Workshop you can easily create such 3D pictures. Components, and rich resource library There are two types of stereographic pictures you can create with this application. Running it brings up the choice screen, letting you pick either hidden image, or floating object. Each component launches in its own window, and you're taken back to the selection screen on exit. Attempting to create a picture with the hidden image method requires two types of resources. Luckily, the application comes with an impressive variety of objects in this regard, so you can easily pick from different depth maps, and textures. On the other hand, you can load your own pictures, or even create them using dedicated drawing tools in a built-in editor. Floating objects, and other tweaks Distance is simply set by adjusting sliders for minimum, maximum values, and mid point. Textures can be tiled across the canvas, or you can use the texture, or depth map height value to generate the stereogram. Sadly, there's no real time preview of your work, and you need to build the image every time you want to analyze changes. The floating objects component functions in a similar manner. A large preview area can also be used to align objects you add. Here, you need to configure a background to help with the 3D effect, add one or more objects on different layers, as well as an additional overlay. When done, pictures can be saved under popular file formats. On an ending note Taking everything into consideration, we can say that Stereogram Workshop is a practical application with which to create stereoscopic pictures with an abundance of built-in resources, or your custom pictures. Two different types of images can be created, and objects built from scratch through dedicated editor components.1. Technical Field The present invention relates to a computer readable medium, an image processing apparatus and an image processing method. 2. Related Art Recently, the image quality and the processing speed of imaging apparatuses such as digital still cameras have been improved. In addition, the technology of removing noise in image data of a taken photograph and creating and displaying a high-quality photograph has been implemented in imaging apparatuses. When a high-quality

Stereogram Workshop

Stereogram Workshop is an application that allows you to create 3D images using graphics cards. The application uses a combination of an animated depth map of the scene, and depth map map to make it into a 3D picture. The application allows you to add a stereoscopic image, a close-up view, or anything else by making a picture that includes both depth maps. In the options, you can make adjustments to the distance from the subject, angle of view, color of the objects, and more. Here, we show you how to create a simple stereogram. This straightforward application will help you make a 3D picture using StereoD, a 3D effect algorithm. Before you start Make sure that you have a graphics card, and 3D accelerator (such as Nvidia, or ATI) installed. If you don't have a graphics card or 3D accelerator, follow the instructions on the Internet to find out how to install. 1. Download StereoD Download StereoD.zip, extract its content to your hard disk, and then run the application. 2. Try it out When the application starts, you will be asked to define the size of the screen, as well as other parameters of the picture. After this, select either a stereoscopic image, or a close-up picture. The application then starts generating the 3D effect. 3. Play with the picture After the picture is done, you will be asked to select a file in which to save the picture. The program will use standard file format, like BMP, JPG, PNG, or TIF. After that, just close the application. The program will close automatically after finishing the work, so you can open it later if you want.
