Last, before it's installed you got to confirm what you do with Fast Folder Access. You see the application screen. It's pretty nice. But will it be useful to you? It's easily forgettable but annoying to have to remember. I suggest you quickly get past that screen and start the installation. Fast Folder Access Manual: What happens if you don't trust a download? It might be fake, or something so malicious you do not want to install it. Luckily, you've got Secureboot. That is a feature that can be enabled on modern PC's that will protect

I have always had a problem with the mouse on my iPhone as it can't be changed on the phone at all and when it is being used as a virtual mouse it does not work well, there is no mouse cursor. They can simply be bought. I had two experience

with a couple of docking stations. The first one is by Logitech and the second one is a Razer. While the Logitech docking station had a built in charging-port, the Razer docking station did not. I had to place a USB-port adapter in the Logitech docking station to power the Logitech, the Razer did not need a USB port for charging. One of the main features of the Razer docking station is that it supports bi-directional Bluetooth communication. Connecting the Razer is pretty easy; just connect your Bluetooth-enabled Razer mouse to the Razer docking station. The mouse then appears as an additional mouse in the Razer Dock's virtual pointer (See image

below). The Logitech has its own charging port and a built-in USB port for your computer's USB-port adapter if you have one. One of the main reasons I went with the Razer docking station is that I had read articles on the Internet that the Logitech could have a negative effect on your computer. I also had read that the Logitech has a shorter battery life than a Razer (See image below).

On the bright side of things, you can rely on applications like Fast Folder Access, a Windows utility that allows you to quickly open any user defined location

on your computer. Access multiple locations through a single folder The whole idea behind the program is actually pretty great: whenever you want to open a specific folder on your computer, simply press the right button of your mouse and there's a whole menu with your favorite locations waiting for you. That's why the configuration screen plays a very important role for this application: it asks you to configure the folders to be displayed in this menu, along with their aliases. This is done in a simple window fitted with a couple of requirement fields, one for the alias and the other for path. Additionally, you can add a separator line. Enable image preview,

---

explore folder on opening, and other behavior tweaks Other than that, there are only a few more settings available. These are found in the options panel and let you enable preview image, ask before removing a selected item from the list and explore folders when opening it in a stand-alone window. It installs and runs just fine and flawlessly performed during our tests, even on modern Windows iterations. Only basic technical computer knowledge is needed to successfully set it up, but a help section is also available to provide more documentation in case you need it. A few last words Overall, Fast Folder Access could come in handy to plenty of users out

there, offering a great mix of a good-looking interface and easy to configure features. It can even back up and restore the settings, so users are on the safe side no matter what. Fast Folder Access
