What's New in the MeGaSearch?

1. Keep track of file-uploading-websites by entering URLs
2. With fully integrated API MeGaSearch can upload files to websites that you specify (only those that give API access are supported)
3. Keep track of the files that you

upload to websites 4. Search files by entering keywords 5. Keeping track of results, using tags and file-ordering 6. Backups 7. Overall statistics, file-uploading-websites, etc. Impressions: There are some things in MeGaSearch that will make you say "how did I ever use anything else..." This includes: - You can enter URLs manually, and the application will automatically download the associated files. Simply follow the website URL to the site you want to download files from - The application also supports logging individual site activity (if you are looking for a specific file), logging general activity, etc. - Support for writing logs to a file. When you close the application, all of its logs will be written to a log file (and you can even find the log file in your "app data") - The GUI is easy to use, having a layout similar to a text-editor - The GUI can be configured from the application's settings screen - A backup feature that will backup the data from the application's settings database to the users' computer, making data protection easy - Fully integrated with the Xul interface - Fully integrated with the win32 API. So that all data can be viewed with Notepad - The application can open files based on their extension, or based on a keyword - You can edit the text that appears in the title of each window -

The application uses a custom.NET-based UI class to enhance the look and feel of the application

License: - Free QMdiArch is a.NET Framework component (and the.NET runtime) that provides the ability for ActiveX-based GUI applications to create MDI Applications that behave more like a desktop application. All of the facilities that are found in standard Windows Forms Applications have been implemented, including the ability to contain windows and dialogs, window layout, resizable and minimizable windows, mouse/cursor events, etc. QMdiArch, like the more widespread Forms control, can create new MDI Forms to contain its windows, or can host a.NET Common Control Library hosted window. The latter is desirable when using QMdi

System Requirements:

Genuine Windows XP or Windows Vista Machine
1.1GB of free disk space 2.0GB of RAM CD/DVD drive Installation will require approximately 5.0 GB of hard drive space The software installer package requires that the installed program and any required runtime or runtime-related files be saved on a different disk than the source code, as the installer will overwrite the source code.
