Serato DJ Pro 2.2.1.44 con CRACK COMPLETA Blinderman Games Kick The Dust - Serato DJ Pro 2.2.1.44 Con CRACK COMPLETA Convenio Para La Preservación De Naturaleza Cultural Caminos SevillanosQ: Remove all elements in a list that do not have a certain property I would like to remove all elements in a list that are not in some "supercollection". For example: Given the following list: ['E', 'F', 'G', 'H', 'I', 'J', 'K', 'L', 'M', 'N', 'O', 'P', 'Q'] If the set of values is {'Q', 'H', 'E'}: I would like to return: ['E', 'F', 'G', 'H', 'I', 'J', 'K', 'L', 'M'] I figured I could use the filter method on the list, but how should I implement the filter? filter(lambda x: Q in x, ['E', 'F', 'G', 'H', 'I', 'J', 'K', 'L', 'M']) A: The base filter() function returns elements that pass the truth test. You can remove all non-q elements as follows: >>> c = {'Q', 'H', 'E'} >>> c.__contains__(e) for e in filter(lambda x: not x in c, c) ['E', 'F', 'G', 'H', 'I', 'J', 'K', 'L', 'M'] You can also
