AutoCAD is currently available for Microsoft Windows, macOS, and Linux operating systems. It also offers versioning and integration with 3D CAD programs including 3ds Max and Maya and GIS software including ArcGIS and Google Earth. Version

history of AutoCAD, released in 1985, includes CAD, Engineering, Architecture, and Landscape apps, as well as Autodesk Revit, a family of software tools for architecture, construction, and interior design. AutoCAD 2018 is Autodesk's most recent release of AutoCAD. The

AutoCAD 2018 release marks the platform transition from the Windows 32-bit operating systems platform to the 64-bit Windows 10 operating systems platform. The transition also includes transition to the new software architecture called the “Graphical User Interface

(GUI)”, which provides more user-friendly interaction of various software components. AutoCAD 2018 includes the following new features: The new Architecture feature in AutoCAD allows users to plan, design, and develop large-scale, multi-storey buildings. The new BIM (Building Information

Modeling) features in AutoCAD 2018 include design intent integration with Revit and ability to export to Revit for further collaboration. In AutoCAD Architecture 2018, a new option called “Tiered Floor Plans” is available. The new ability to enter and modify geometric parameters directly in the

drawing is now supported. One of the other major changes in AutoCAD 2018 is the introduction of the now ubiquitous “Windows Taskbar”. Aims to replace the “desktop” With the introduction of a new software architecture, AutoCAD 2018 is intended to replace the desktop interface with a

redesigned, more usable user interface, based on the new “Windows Taskbar”. The Windows Taskbar (also known as “taskbar” or “task manager”) is the feature that you see on the far right edge of a screen, where your username or e-mail address is usually displayed. Using the

Windows Taskbar you can view your running programs and open programs from your desktop applications. The “Windows Taskbar” (also known as “taskbar” or “task manager”) is the feature that you see on the far right edge of a screen, where your username or e-mail

Formal methods AutoCAD supports a variety of methods for drawing objects, connecting points, and drawing over existing drawings. In AutoCAD 2008 and before, the AutoCAD program used the familiar ACS line-

drawing style. Its legacy continues in AutoCAD LT, with the use of parallel dashed lines in lieu of the dots used by other CAD programs. In AutoCAD 2012, all lines and arcs are drawn in the traditional line style. This style was not updated for AutoCAD 2013, which reverted to traditional line and arc

drawing style. The AutoCAD 2012 program uses a new method for drawing in 2D. In this method, parallel lines are used to make 2D lines that are connected at multiple points. The new method, called Dynamic Input, has been adopted for 2D drawing, but is not used in 3D. The new method for

drawing curves in 2D and 3D is called Warp. The new method for drawing curves in 2D and 3D is called Warp. It has been adopted for 2D drawing, but is not used in 3D. The Warp method adds multiple control points, much like the Boolean method but more easily. The user chooses what to be

connected, such as a tangent line or a perpendicular line. It creates a spline for curved line, such as a parabola or a circle. Scripting AutoCAD supports two languages for script writing, AutoLISP and Visual LISP. AutoLISP can be used for all AutoCAD-based application including AutoCAD LT.

Visual LISP can be used for standalone AutoCAD, only. AutoCAD's scripting environment is referred to as an extension of the program. Because of this, it is viewed as a separate product. As a scripting language, the AutoLISP extension is a derivative of the Lisp programming language. Visual LISP is a

simple language based on the BASIC programming language. The plugin-based system for third-party applications allows third-party developers to add AutoCAD-based plugins to create additional tools and features in AutoCAD. AutoLISP is the primary AutoCAD scripting

language, but Visual LISP is also widely used for programming these plugins. The addition of Visual LISP in the latest AutoCAD releases has allowed Microsoft Visual Basic.NET (VB.NET)
